### Certificate of Analysis and Data Sheet

# Recombinant Mouse Vascular Endothelial Growth Factor (121)

**Catalog No.**  
228-11616

**Source:**  
*Escherichia Coli*

#### ***Synonyms***

Vascular endothelial growth factor A, VEGF-A, Vascular permeability factor, VPF, VEGF, MGC70609.

#### ***Introduction***

Vascular endothelial growth factor is an important signaling protein involved in both vasculogenesis and angiogenesis. As its name implies, VEGF activity has been mostly studied on cells of the vascular endothelium, although it does have effects on a number of other cell types (e.g. stimulation monocyte/macrophage migration, neurons, cancer cells, kidney epithelial cells). VEGF mediates increased vascular permeability, induces angiogenesis, vasculogenesis and endothelial cell growth, promotes cell migration, and inhibits apoptosis. In vitro, VEGF has been shown to stimulate endothelial cell mitogenesis and cell migration. VEGF is also a vasodilator and increases microvascular permeability and was originally referred to as vascular permeability factor.

Elevated levels of this protein is linked to POEMS syndrome, also known as Crow-Fukase syndrome. Mutations in this gene have been associated with proliferative and nonproliferative diabetic retinopathy.

#### ***Description***

Vascular Endothelial Growth Factor-121 Mouse Recombinant produced in E.Coli is a homodimer, non-glycosylated, polypeptide chain containing 121 amino acids and having a molecular mass of 28.4 kDa. Recombinant Mouse VEGF-121 is a truncated version of Murine VEGF-165.

The VEGF-121 is purified by proprietary chromatographic techniques.

#### ***Physical Appearance***

Sterile Filtered White lyophilized (freeze-dried) powder.

#### ***Formulation***

The protein was lyophilized from a concentrated (1mg/ml) solution with no additives.

#### ***Solubility***

It is recommended to reconstitute the lyophilized VEGF-121 in sterile 18MΩ-cm H<sub>2</sub>O not less than 100μg/ml, which can then be further diluted to other aqueous solutions.

**The products are furnished for LABORATORY RESEARCH USE ONLY.  
Not for diagnostic or therapeutic use.**

---

### ***Stability***

Lyophilized VEGF-121 although stable at room temperature for 3 weeks, should be stored desiccated below -18°C. Upon reconstitution VEGF-121 should be stored at 4°C between 2-7 days and for future use below -18°C.

For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA).

**Please prevent freeze-thaw cycles.**

### ***Purity***

Greater than 97.0% as determined by

(a) Analysis by RP-HPLC

(b) Analysis by SDS-PAGE

### ***Amino acid sequence***
